desktop card printers

Javelin JX™ Printers

Enhanced features & benefits for instant issuance printers that work with most Gaming Software & Operating Systems

Most Javelin™ desktop card printers are now available with the new enhanced JX options. These printers deliver additional functionality and increased performance and security, and are ideal for monochrome printing applications in almost any instant issuance environment.

Designed initially for the Casino and Gaming industry, the special board fitted inside a Javelin JX printer provides intelligent solutions in other markets where special magnetic stripe encoding is required, or the printer is needed to be run from a mainframe or UNIX based system. Card layouts, monochrome logos and graphics, and special fonts can be stored within the printer for greater flexibility.

Where multiple card types are used, the operator can even be prompted to load the correct card type, and a built-in HTML interface allows for updates and remote diagnostics.

Unlike the majority of competitive card printers, the Javelin JX series are self-contained “intelligent” printers designed to connect to and interface with virtually any player’s card software system (including Bally’s, IGT and Aristocrat).

Javelin JX printers connect to casino and other networks in a similar fashion to ImageMaster, UG800 or SP60 monochrome printing, but at a fraction of the cost and with a multitude of additional features & benefits.

In the Casino & Gaming markets, Javelin JX printers are the ideal solution for:

- Player Cards
- Loyalty Cards
- Member Cards
- Main Card Issuance
- Pit Areas
- Floater Machines
- Back-up Printers
- Premier Card Issuance

Also suitable for:

- Employee ID Cards
- Multi-site IP based Access Control Cards
- Retail Store Loyalty Cards
- Hotels & Entertainment
- Guest & Employee Cards
- Wholesale Store
- Membership Cards
- Financial Instant Card Issuance
- Instant Gift Cards
- Card Production / Personalization
- Service Bureaus
- Multi-Unit Batch Printing

... and more!
